## WORK EXPERIENCE

**Software Engineer Intern**, Yrobot Inc, Boston, MA, United States 06/22 - 09/22

- Designed and developed a File Transferring Simulator for company's embedded system of wearable devices.
- Wrote C++ code for dev board and Python for client endpoint that can communicate via TCP and X/Y/ZMODEM protocol

**Software Developer Intern**, BU Spark!, Boston, MA, United States 09/21 - 01/22

- Created a website that loads mutual aid resources from Postgres database, then displays all food resources and mutual aid locations around Greater Boston area in an interactive map by using mapbox API.
- Designed and developed the front-end in Gatsby to improve user experience by adding multi-language feature.
- Deployed frontend via GitHub Pages with https secure access, and utilized Docker Compose to containerize back-end application, then deployed on AWS EC2 instance, and secured the communication between front-end and backed with TLS/SSL certificate.

## PROJECTS AND RESEARCH

**Deep-Learning Based Plant Disease Detection** (Python, TensorFlow, Slurm/PBS scheduler): 06/19 - 12/20

- Awarded \$5500 scholarship by proposing an image-based deep learning approach and application framework design.
- Compared pros and cons of approaches between machine learning and deep learning-based detection.
- Conducted sequences of hyper-parameter tuning to improve the result, including train-validation split ratio, batch size, and complexity of pre-trained models, and resulted in 99.5% and 98.11% accuracy in training and validation respectively.
- Completed "Honors Research Distinction" thesis over 70+ pages and presented the result at two research forums.

**Multi-threaded MapReduce Emulator** (Multithreaded programming, C, makefile, Valgrind): 01/21 - 05/21

- Created and implemented a multi-threaded version of MapReduce Emulator for counting the number of occurrences of words for a given file, which potentially can be used for search engines or web crawlers in text processing.
